

Changing default OU for new USERS and COMPUTERS

By default, users are created in “Users”, and Computers in “Computers” OU, but these are the default folders, and one may want to differentiate between them, in ex. when using Azure AD Hybrid and Autopilot or Intune, when new computers are domain joined, you want them to go to specific sync’ed OU’s instead:

ad1.png

To see the default OU’s, that are in use today, type this into Powershell:

Computers:

```
Get-ADDomain | select computerscont*
```

ad2.png

Users:

```
Get-ADDomain | select userscont*
```

ad3.png

How to change:

Computers:

```
redircmp "OU=Autopilot Domain Join,DC=domain,DC=local"
```

Users:

```
redirusr "OU=Users,OU=Microsoft365,DC=domain,DC=local"
```

That’s it! - Effective immediately ☐
