

# Install Azure PowerShell module

For the current user:

```
if ($PSVersionTable.PSEdition -eq 'Desktop' -and (Get-Module -Name AzureRM -ListAvailable)) {  
    Write-Warning -Message ('Az module not installed. Having both the AzureRM and ' +  
        'Az modules installed at the same time is not supported.')  
} else {  
    Install-Module -Name Az -AllowClobber -Scope CurrentUser  
}
```
