

Starbuck Medication + Wet Food

These have been updated as of 4/30/26!

Starbuck's medication is in one of two bottles with pill counters attached to them. The smaller of the two bottles is given to her Monday/Wednesday/Friday, and the larger white bottle is given daily. It is sitting on top of three stacked gray plates on the kitchen counter with a 1 Tbsp measuring spoon. There is a black cylinder that can crush the pills in this same location, where you place the pills inside after unscrewing it, and then screw the cap back on. This will crush it for you.

The wet food is in the refrigerator on the bottom right shelf. It has a red lid that can be reused.

Please scoop out 1 Tbsp of food for Starbuck (white and tabby) and half of that portion for Olivia (gray). Each cat gets a plate. Please smoosh the food down onto the plate so it's easier to eat.

IN STARBUCK'S (white and tabby) wet food, empty the black cylinder into the wet food and MIX WELL. Add a small dollop of untouched wet food on top (the size of your pinky nail).

- No one can finish Starbuck's (white and tabby) plate and she will probably take the longest.
- Olivia (gray) typically finishes her plate first and leaves remnants. Starbuck (white and tabby) can finish Olivia's plate and I'm certain she will want to.

Please rinse the measuring spoon and all three plates so that they're relatively clean and leave them in the sink. Thanks!!

Please also double-check that the food bowls in the kitchen have food in them. Entering the kitchen, they are on the floor on the right-hand side, in front of the tall, black shelving unit. If they need to be refilled, the food is in the blue, rectangular container (with a lid that unsnaps from the bottom latch) to the left of the bowls. There is a scoop in the blue container.
