

# warning: cannot send disk (Broken pipe) (I/O error) (already exists)

If you see an error when trying to replicate such as these.

```
2023-11-14 14:38:08 100-0: warning: cannot send 'NVMe-R10-6D/vm-100-disk-0@__replicate_100-0_1699990683__': Broken pipe
```

```
2023-11-14 14:38:08 100-0: cannot send 'NVMe-R10-6D/vm-100-disk-0': I/O error
```

```
2023-11-14 14:38:08 100-0: command 'zfs send -Rpv -- NVMe-R10-6D/vm-100-disk-0@__replicate_100-0_1699990683__' failed: exit code 1
```

```
2023-11-14 14:38:08 100-0: [mut7pve202] volume 'NVMe-R10-6D/vm-100-disk-0' already exists
```

Verify the disk it's trying to replicate in the error and delete the snapshot replacing the disk number with the one in the error.

```
zfs destroy -r rpool/data/vm-100-disk-0
```
