Fdisk results in GPT mismatch

```
GPT PMBR size mismatch (225279 != 250879) will be corrected by w(rite).
```

To fix the above, run the following set of commands.

1. SSH into the server and log into root.

```
sudo su
```

2. Run `parted`.

```
parted
```

3. List all disks.

```
print all
```

4. When it finishes listing the disks, it will ask you if you want to "Fix" the errors or not. Type `fix`.

5. Reboot the Synology device.
