Add Multiple DNS Servers Via Command Line

```
netsh interface ipv4 add dnsserver name="Local Area Connection" address=192.168.100.48 index=2
```

From <https://practical365.com/exchange-server/how-to-add-multiple-dns-servers-to-windows-server-2008-core/>

ICACLS Backup/Restore

Open an elevated cmd prompt.

Save

```
icacls E:\ /save "E:\ntfsDdrive.txt /t /c
```

Restore

```
icacls E:\ /restore "E:\ntfsDdrive.txt
```
